Purpose, Scope, and Responsibilities

Purpose

This SOP establishes the standard process for completing all tasks required to resolve Oracle-related calls and ServiceDesk Plus tickets.

Scope

This SOP applies to both Junior and Senior NOC analysts across all shifts, covering technical tasks within the Oracle application and ticket handling within ServiceDesk Plus. This SOP does not include information pertaining to Oracle incidents/outages or Oracle Java tickets.

Responsibilities

All NOC analysts are responsible for:

- Reviewing Oracle ticket details
- Performing the required technical tasks within the Oracle application (e.g., updating employee records, setting up user accounts, resetting passwords)
- Documenting the actions taken to resolve the ticket and updating the ticket's status once completed
- Logging the status of in-progress tickets not completed by end of shift
- Assisting with calls related to Oracle password resets.
- Communicating necessary questions and responses regarding tasks
- Escalating tickets that fall outside of the NOC team's responsibility or troubleshooting abilities

Understanding Oracle Terms and Tickets

What are roles, responsibilities, and profile options?

- The Oracle user profile is what contains the user's role, responsibilities, and profile options. This is tied to the user's employee record.
- The role a user holds, based on their job title, determines which responsibilities and profile options a user has. On special occasions, someone with the proper authority can approve additional responsibilities or profile options for a user, regardless of their role.
- Profile options and responsibilities grant a user specific access to perform designated tasks and job functions.
- Responsibilities inherited through assigned roles are called "indirect" responsibilities. Extra responsibilities that are manually added to user profiles are called "direct responsibilities."

Types of Oracle Request tickets

Most oracle tickets fall into one of these categories:

- Add
- Delete
- Password reset

While most Oracle "add" tickets are completed using the same general process, the following role requests are handled differently:

- Warehouse employees
- Call center employees
- Employees with an existing user profile and role

The process for completing each type of Oracle request is detailed in the corresponding section of this manual.

Different Oracle Tickets Explained

There are two types of Oracle “add” tickets:

1. Role request:

“SARP – Oracle EBS – Add Oracle EBS for *[Employee Name]*”

This is submitted when an employee needs a new user profile or a new role in Oracle.

This could be an existing employee requiring a role change, or a new employee who needs an initial profile set up.

To submit a role request, an employee must choose “Oracle EBS Roles” on access.rv.com.

2. Responsibilities request:

“SARP – Oracle Special Access – Add Oracle EBS Special Access for *[Employee Name]*”

This is submitted when an employee needs specific access granted to perform different job duties.

This should only be submitted when a user already has an Oracle user profile and role.

To submit a responsibility request, an employee must choose “Oracle EBS Responsibilities” on access.rv.com.

Oracle EBS Special Access

Responsibilities: CWI Purchasing stores
Approval Manager: 318550: Shannon Wilz - IT Procurement & Asset Mgmt Management
ExpenseReport Approval Limit / Cost Centers: 0
Requisition Approval limit: 0

There are also two types of Oracle "delete" tickets:

1. "SARP – Oracle EBS – Delete Oracle EBS for [Employee Name]"
2. "SARP – Oracle Special Access – Delete Oracle EBS Special Access for [Employee Name]"

This is a request to disable the role and revoke Oracle access from the user entirely.

This is a request to remove direct responsibilities given to a user.

Both types of "delete" tickets contain all the information from their original "add" tickets.

Oracle Password Reset Requests (RF Gun Password Resets)

When setting up a user profile in Oracle, the set password is typically not important. Most employees, such as retail employees, never use it. However, warehouse employees need this password to log in to his or her RF gun scanner. For context, an RF scanner is a portable, wireless device used in warehousing, logistics, and retail to scan barcodes and RFID tags.

Most password reset requests come in as calls from warehouse employees, typically saying something like, "I need an RF scanner password reset."

However, some employees choose to submit tickets instead of calling. These usually land in the unassigned queue in ServiceDesk Plus and should be moved to the NOC queue to be completed.

These tickets will always look a bit different, since they are typically submitted via email and vary depending on what the employee chooses to write.

Here are examples of RF scanner password reset requests submitted to ServiceDesk Plus:

Melissa Segura - Feb 17, 2026 09:20 AM

How to Open and Set Up Oracle

Opening Oracle

1. Open the Oracle web interface in a browser using the link below. It's recommended to bookmark this page for quick access; it can also be found in the Camping World SharePoint.

https://prd.freedomroads.local/OA_HTML/OA.jsp?OAFunc=OANEWHOMEPAGE

2. If prompted to log in, enter your Camping World Microsoft email address and password. This portal uses SSO (single sign-on), so no separate Oracle credentials are needed.
3. Once logged in, you will be taken to the main Oracle homepage.

- On the left side of the page, in the “Navigator” section, click “CWI Store Employee Setup.” This will open a drop-down menu.

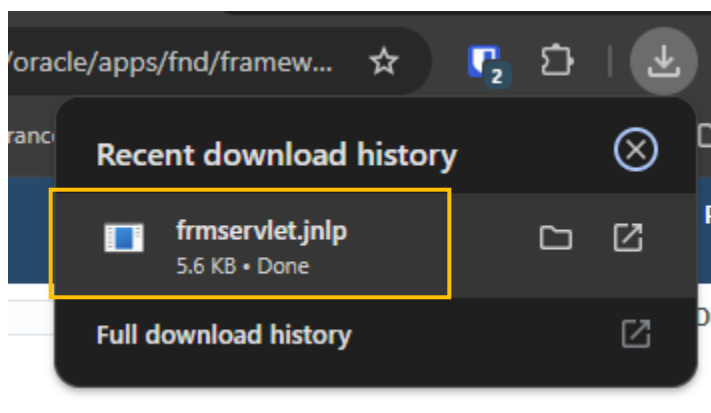

Navigator

Personalize

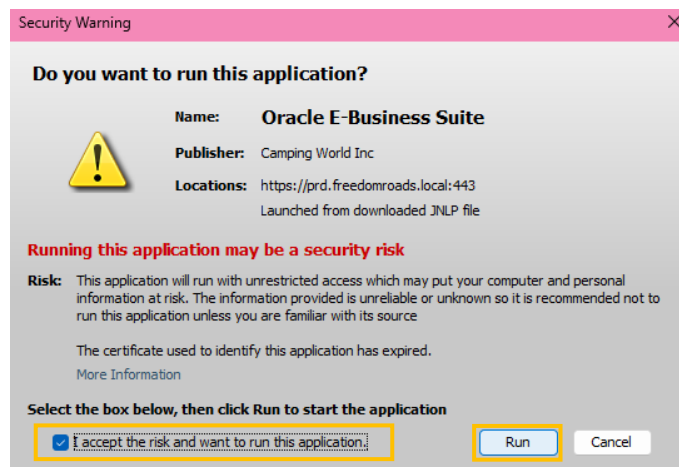

- ▶ CWI HelpDesk
- ▶ CWI Store Employee Setup
 - ▶ CWI Customer
 - ▶ View Users
- ▶ Store Employee Set-Up
- ▶ Other
- ▶ CWI STORE LOGON USER
- ▶ Internet Expenses

- From that drop-down menu, click “CWI Customer.” This will automatically start a download.

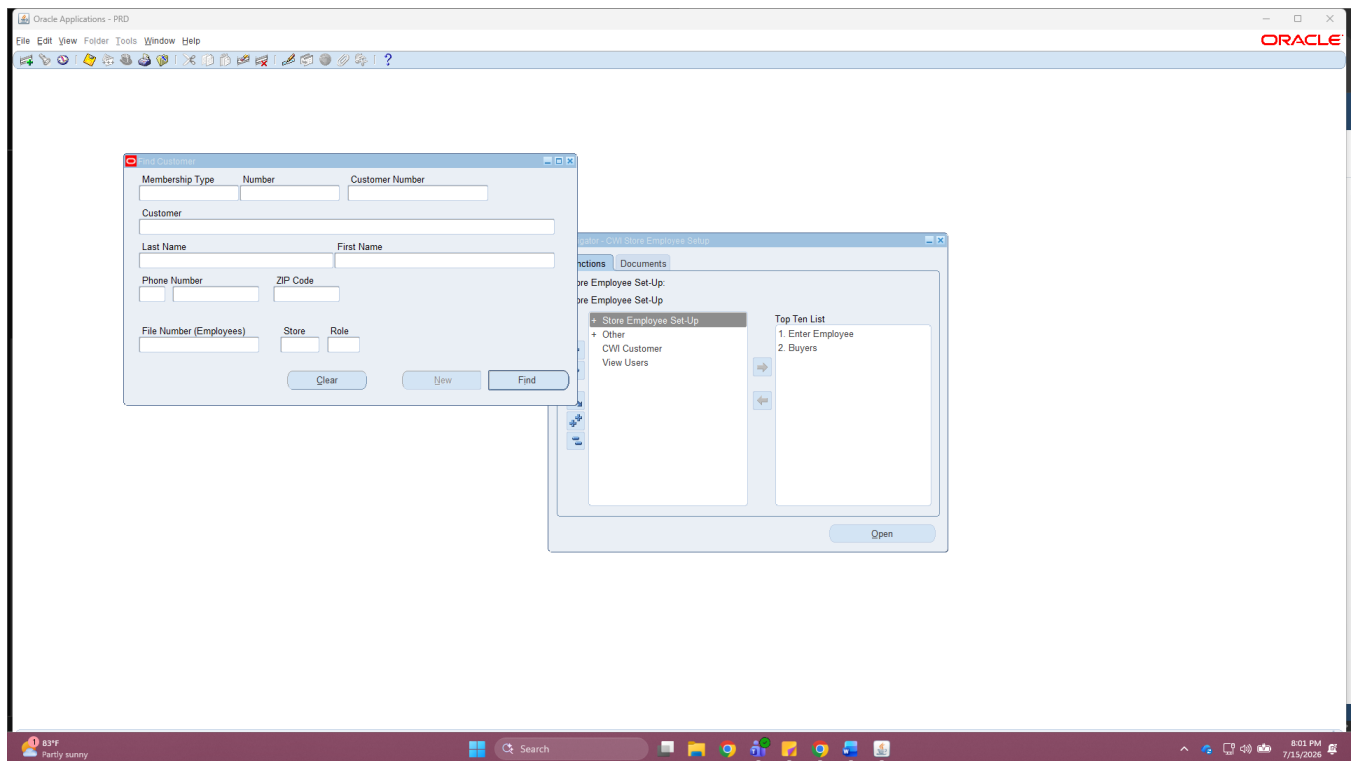

- From the download menu in your browser, click on the download to open it. You can also find this download in the “Downloads” folder of your file explorer.

- A security warning will pop up. Check the box at the bottom left of the window and click “Run” to open Oracle.

The Oracle application will open in a window that looks like this:

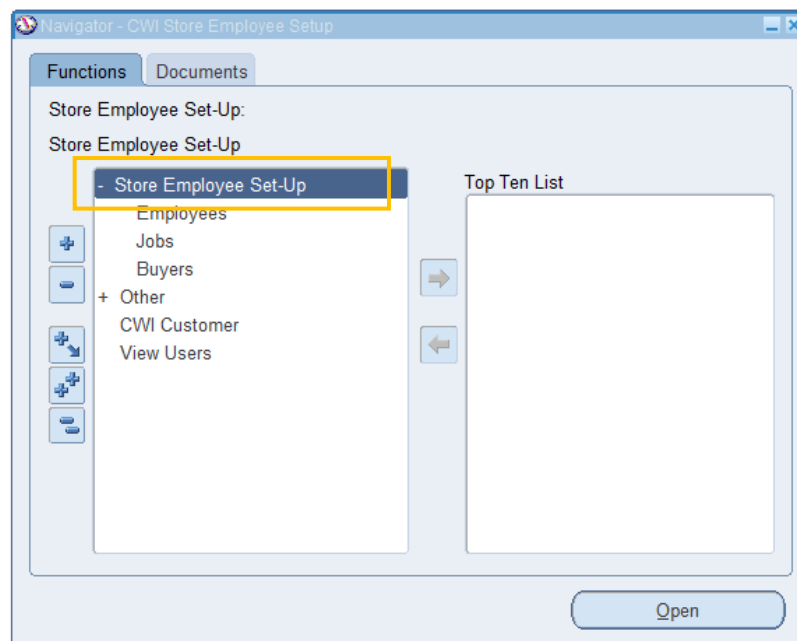

Each time you need to open Oracle, you will follow this procedure.

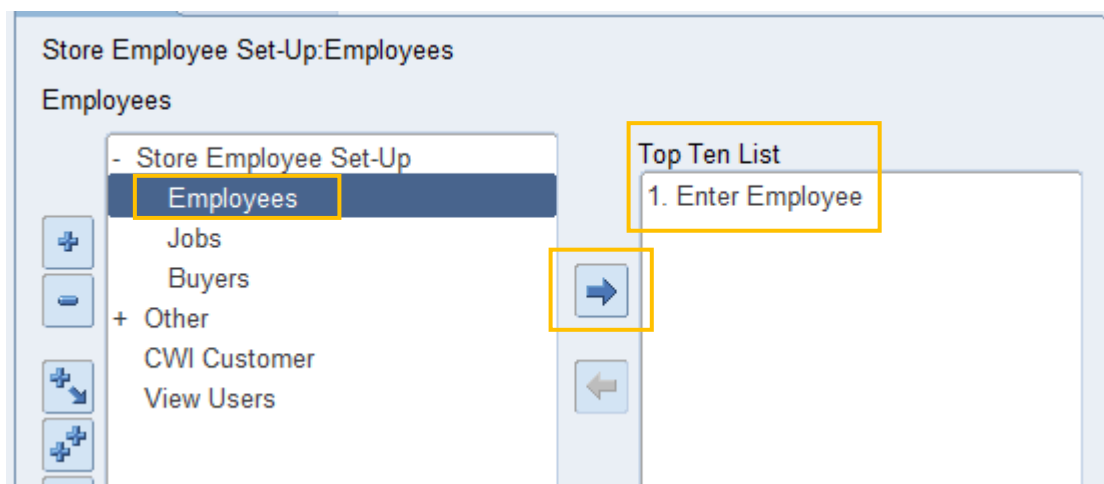

Setting up the “Top Ten List”

The Top Ten List is a quick way to navigate through frequently used functions in the Oracle application. This section will walk you through how to add the functions that you will use most as a NOC analyst. This manual details how to complete Oracle requests using the Top Ten List, so it is important to set this up properly.

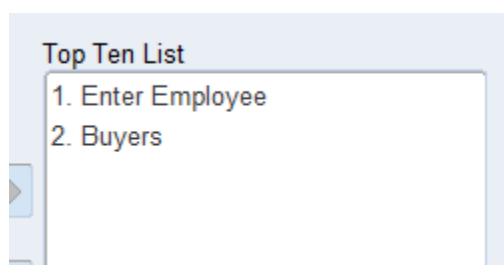

1. Upon opening the Oracle application, you can close the “Find Customer” dialog box. In the “CWI Store Employee Setup” navigation pane, double click “Store Employee Set-Up” to open the drop-down list.

2. Select “Employees” from the list, then click the arrow pointing to the right. “1. Enter Employee” will then pop up in the Top Ten List box.

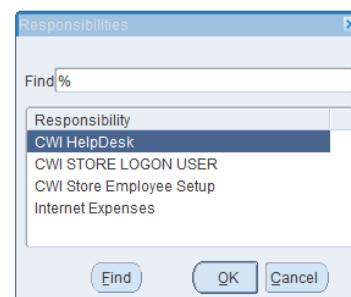

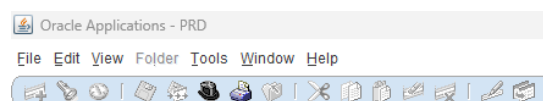

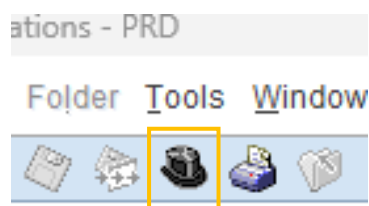

3. Repeat step 2 for "Buyers" in the list. Your list should now look like this:

Each Top Ten List is different depending on the responsibility. The previous steps showed what to add under the CWI Store Employee Setup responsibility. The next set of steps will cover which functions to add for the CWI STORE LOGON USER responsibility.

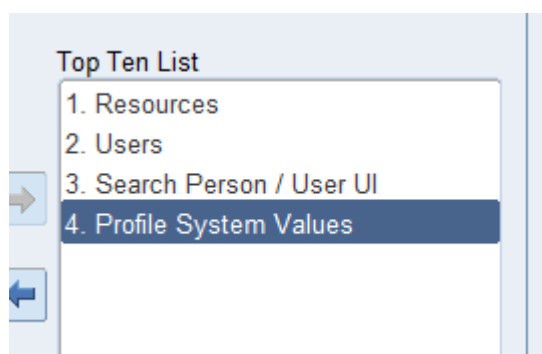

4. In the top left of the Oracle window, click the top hat icon. This will open the list of responsibilities you have.

5. Select "CWI STORE LOGON USER" and click "OK". This will open the "CWI STORE LOGON USER" navigation pane.

6. On the left side, double click "WMS Resources" to open the drop-down list. Select "Resources" from the list and use the arrow to move it to the Top Ten List.
7. On the left side, double click "Security Set-Up," then double click "User" underneath. Select "Define" and use the arrow to move it to the Top Ten List.
8. On the left side, scroll to the bottom of the box. Select "Users" and use the arrow to move it to the Top Ten List.
9. Scroll back up the left side list until you find "Profile." Double click this to open the drop-down list. Select "System" and use the arrow to move it to the Top Ten List.

The completed list should look like this:

This concludes the Oracle application set up process.

Completing Oracle “Add” Request Tickets

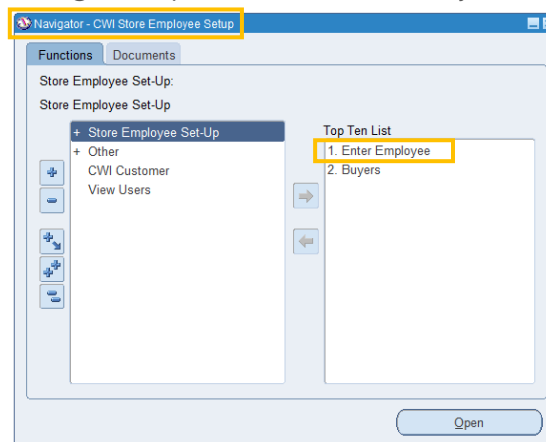

This section will detail how to complete Oracle “add” requests. This includes:

- Standard role requests
- Warehouse employee role requests
- Call center employee role requests
- Responsibilities requests

Role requests for warehouse and call center employees require a few extra steps beyond the standard process. To complete these tickets, first follow the steps listed for the standard role request, then continue with the corresponding additional steps.

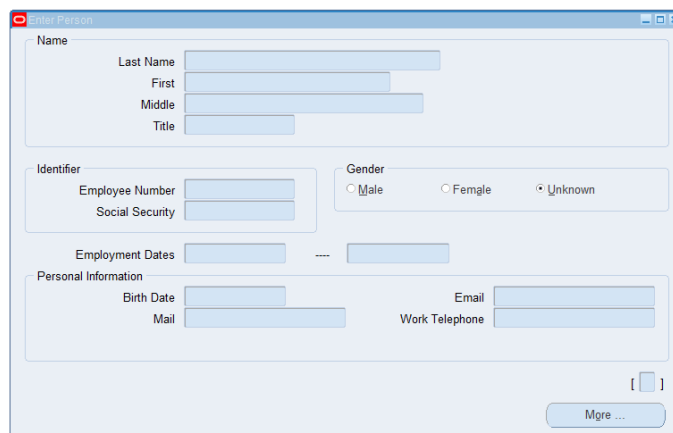

The first step in completing *any* role request ticket is to find and update the employee record.

1. Open Oracle. The “CWI Store Employee Setup” navigation pane should already be open. Close any other boxes.

2. Double click “Enter Employee” from the Top Ten List. This will open the “Enter Person” dialog box, which allows you to view and edit employee records.

3. On your keyboard, hit the **F11** key (or **FN + F11**). The text fields should turn blue. This is the search function.

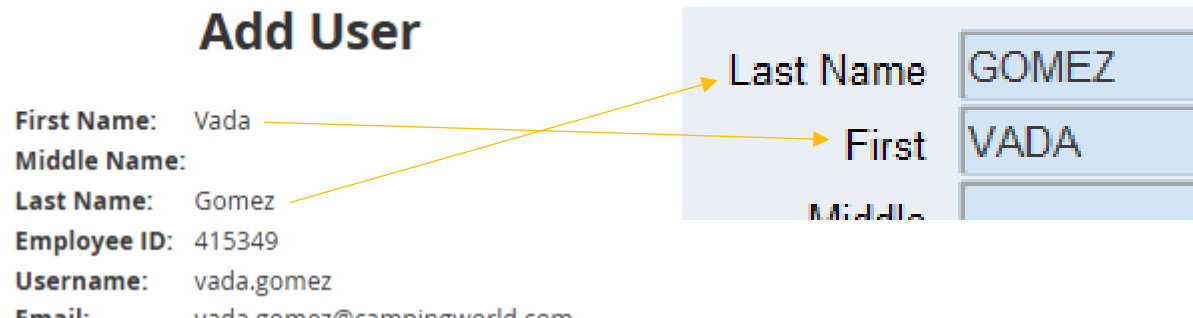

- Enter the user's last name in the "Last Name" field and first name in the "First Name" field, both in all caps, using the name provided on the request ticket. Then, hit **CTRL + F11** (or **CTRL + FN + F11**) on your keyboard.

OpenIDM ServiceDesk | - Jul 16, 2026 02:50 PM

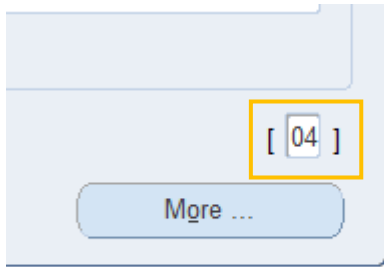

Add User

First Name: Vada
Middle Name:
Last Name: Gomez
Employee ID: 415349
Username: vada.gomez
Email: vada.gomez@campingworld.com

Last Name	GOMEZ
First	VADA
Middle	

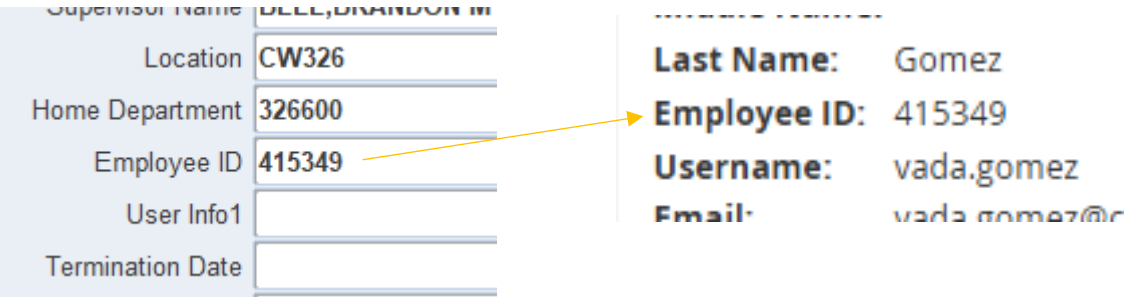

- The employee's information should now populate in the text fields. To check that this is the same employee from the request ticket, click the number box in the bottom right corner of the dialog box. This will open the "Additional Personal Details" dialog box.

Ensure that the employee ID listed for the employee matches the one written on the ticket.

Supervisor Name	DELL, BRANDON M
Location	CW326
Home Department	326600
Employee ID	415349
User Info1	
Termination Date	

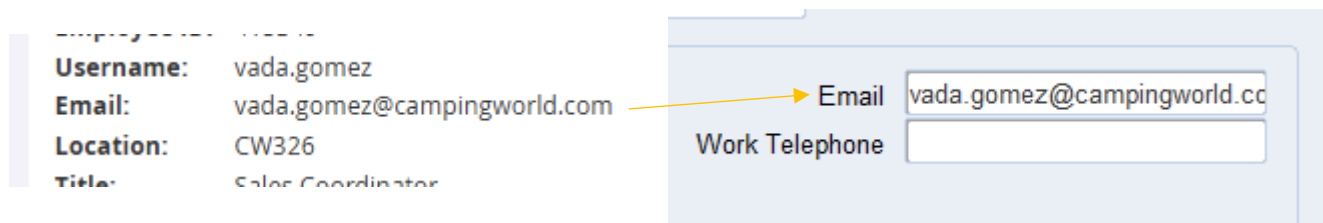

Last Name:	Gomez
Employee ID:	415349
Username:	vada.gomez
Email:	vada.gomez@c

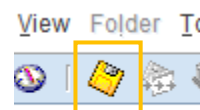

If the employee ID numbers do not match, close the "Additional Personal Details" dialog box. In the "Enter Person" box, use the down arrow key to scroll through other employee records until you find the correct one.

If you cannot find the correct employee record, or the record has an "end date," add a note to the ticket stating "not found," and change the ticket's status to "waiting."

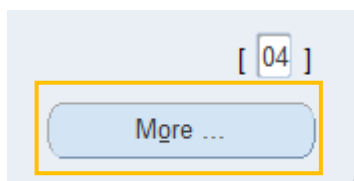

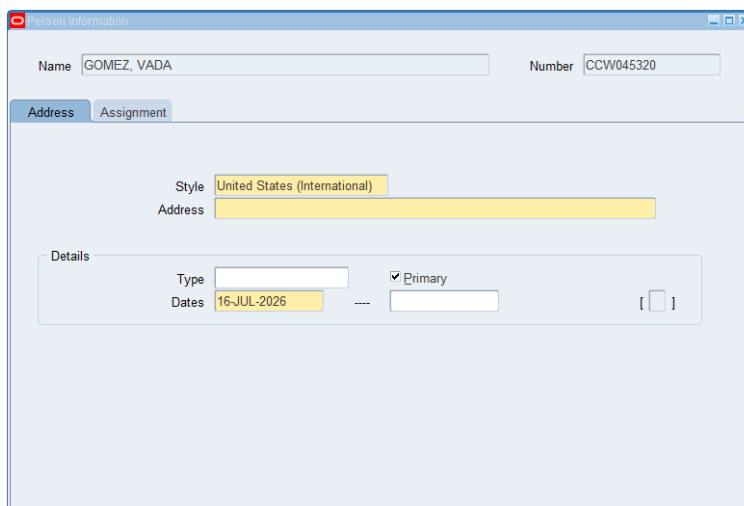

- Close the "Additional Personal Details" dialog box. In the "Enter Person" box, update the email field to match the email on the ticket.

Hit the yellow save button in the top right corner of the Oracle window. Do this before closing any dialogue box to ensure any changes are saved.

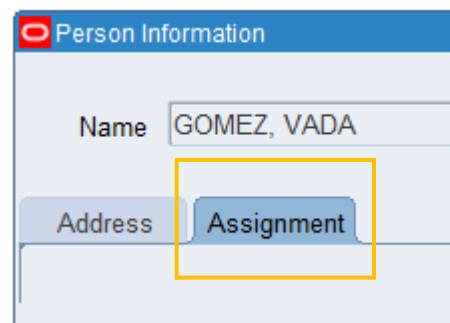

- Click "More..." in the bottom right corner to open the "Person Information" dialog box.

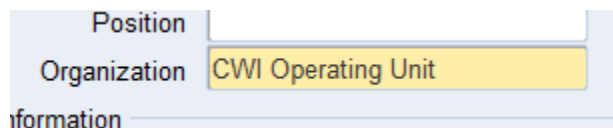

- Click the Assignment tab. The text fields should be at the default state.

If the employee has already been assigned an Oracle role, some fields may already have information. If so, proceed with the steps below to ensure they are updated.

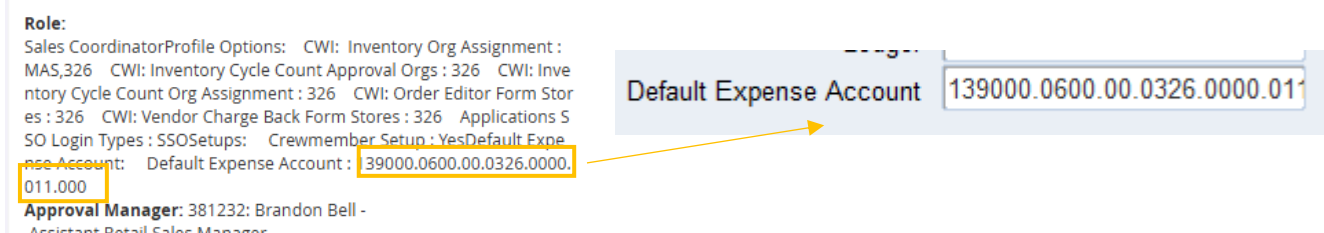

9. In the "Organization" field, erase "Setup Business Group." Type "C" and hit **Tab**. The field should auto-populate with "CWI Operating Unit."

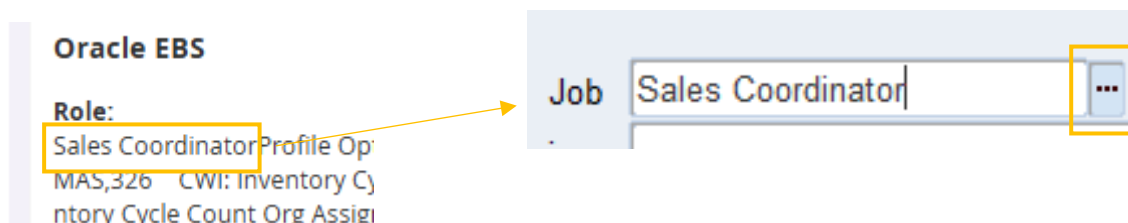

10. In the "Ledger" field, type "C" and hit **Tab**. The field should auto-populate with "CWGSE."

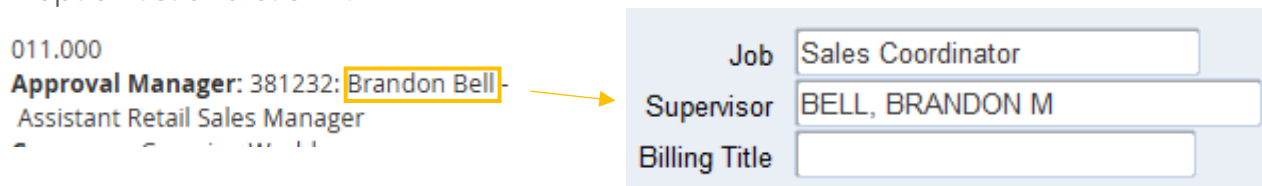

11. Copy the Default Expense Account listed in the "Role:" section of the request ticket. Paste this number into the "Default Expense Account" field in Oracle. This step isn't necessary for warehouse employee role requests.

12. In the "Job" field, enter the role listed in the request ticket. Some may slightly differ from the options in Oracle. If the job isn't found in Oracle, you can click the three dots at the end of the box to search for the correct job. For example, you would enter/choose "Warehouse Person" rather than DC Specialist for warehouse employees.

13. In the "Supervisor" field, enter the person listed as the approval manager on the request ticket. Use the format LAST, FIRST. Hit **Tab** to ensure Oracle selects the correct person. If there are multiple people with the same name, select the correct person from the option list and click "OK".

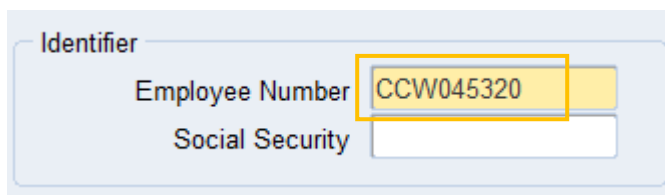

Save the changes using the Oracle save button, and close the "Person Information" dialog box.

14. If the request ticket is for a warehouse employee, copy the employee number from the employee record, and save this for later. Remember that this is NOT the same as the employee ID.

For other role requests, skip this step.

Save and close the employee record.

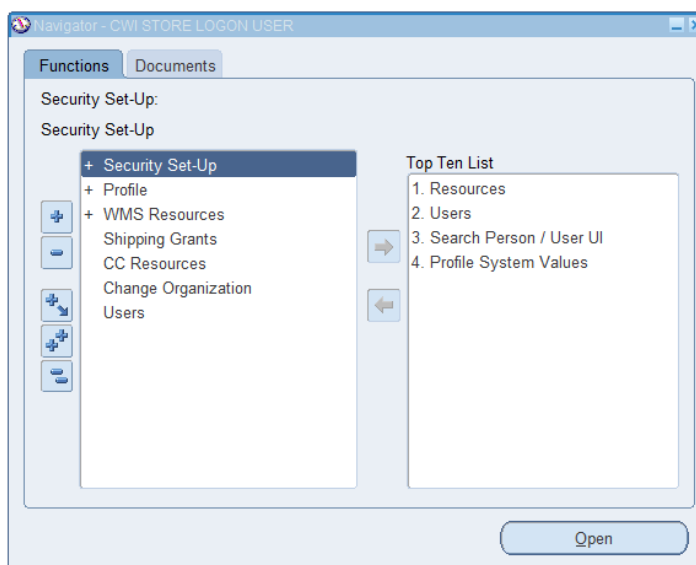

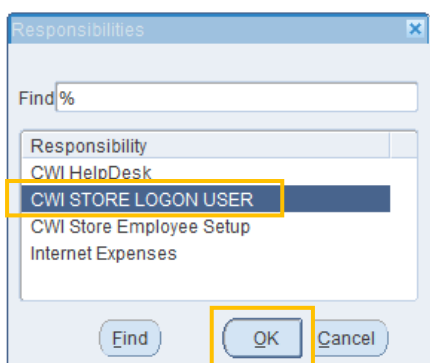

Identifier

Employee Number CCW045320

Social Security

The next step in completing Oracle "add" requests is to create a user profile and assign profile options.

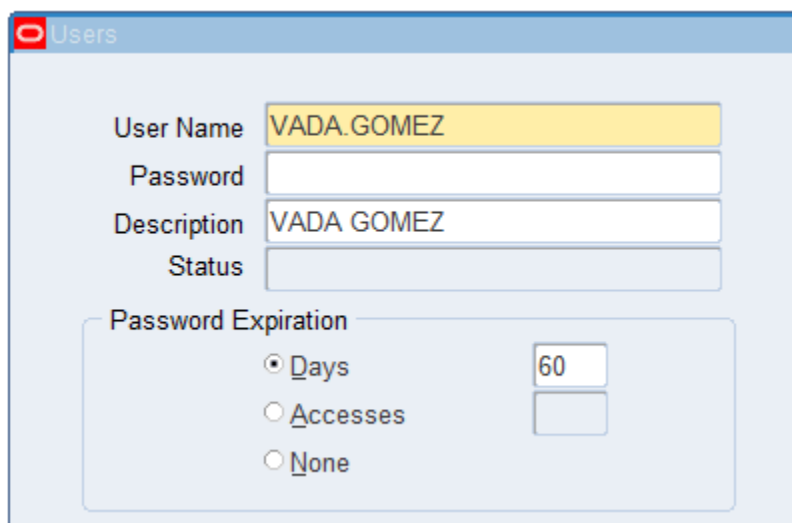

15. Open the "Responsibilities" navigation pane using the tophat icon in the top right corner of the Oracle window. Select "CWI STORE LOGON USER" and click "OK" to open the navigation pane.

16. Double click "Users" from the Top Ten List to open the "Users" dialog box.
17. Hit **F11** to open the search function. In the "User Name" field, enter the username listed on the request ticket. Hit **CTRL + F11** to search for the user profile.

If no information populates the fields, proceed to the next step. If a user profile comes up, skip to step ##.
18. Hit **F4** to exit the search function. Re-enter the username, then hit **Tab**.
19. Enter a password to set for the user profile. Typically, "Welcome1 " is the chosen password to initially set. Type the password, hit **Tab** then type the password once more.
20. In the "Description" field, enter the user's name in all caps.
21. Under "Password Expiration," select "Days" and enter "60" in the field to the right.

This is what the user profile should look like at this point:

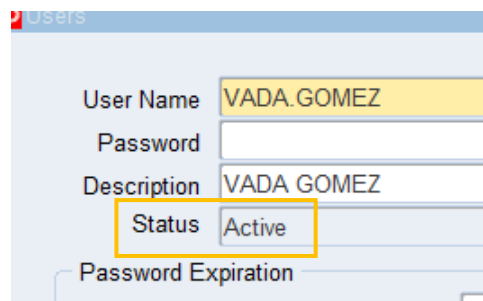

The screenshot shows a window titled "Users" with a red icon. It contains several input fields and a section for password expiration. The "User Name" field is highlighted in yellow and contains "VADA.GOMEZ". The "Password" field is empty. The "Description" field contains "VADA GOMEZ". The "Status" field is empty. The "Password Expiration" section has three radio buttons: "Days" (selected), "Accesses", and "None". To the right of the "Days" radio button is a text box containing "60".

User Name	VADA.GOMEZ
Password	
Description	VADA GOMEZ
Status	
Password Expiration	
☒ Days	60
☐ Accesses	
☐ None	

22. On the right side, in the "Person" field, enter the user's name in the format LAST, FIRST. Hit **Tab** to select the correct employee. The employee's email address should automatically populate in the "E-mail" field.

23. Save the user profile using the yellow save icon. This should create the user profile and set the user's status to "Active."

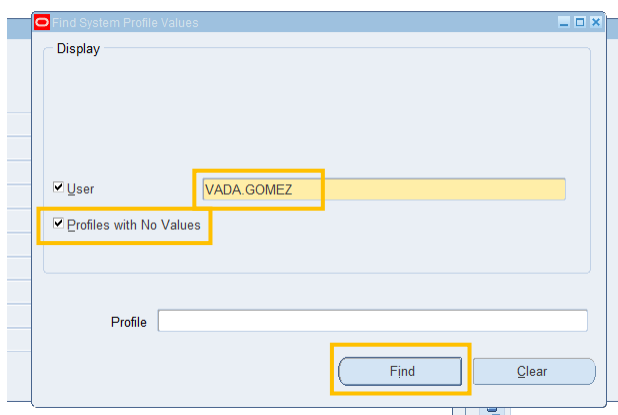

The 'Users' dialog box displays the following information:

User Name	VADA.GOMEZ
Password	
Description	VADA GOMEZ
Status	Active
Password Expiration	

24. Close the "Users" dialog box. In the Top Ten List, double click "Profile System Values."

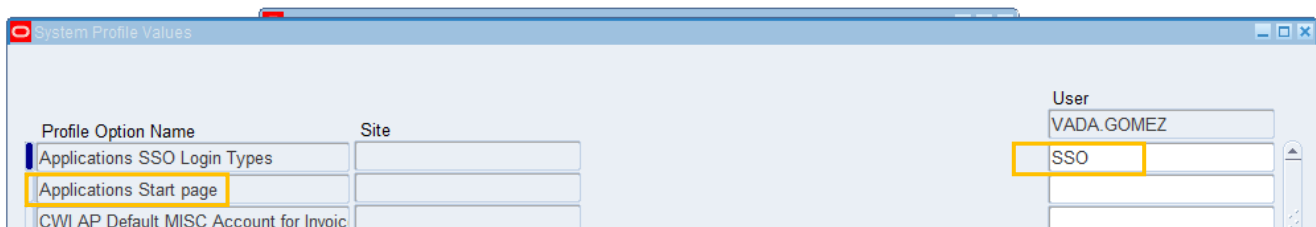

25. Two dialog boxes will pop up. In the "Find System Profile Values" box, enter the username. Ensure the checkbox next to "Profiles with No Values" is checked. Then hit "Find."

The 'Find System Profile Values' dialog box shows the following fields and options:

- Display: [Empty text area]
- ☒ User: VADA.GOMEZ
- ☒ Profiles with No Values
- Profile: [Empty text field]
- Buttons: Find, Clear

26. A list of profile options and text fields will appear in the "System Profile Values" dialog box. For all employees, the "Application Start Page" will have the same value. Enter "SSO" into the corresponding text field.

The 'System Profile Values' dialog box displays a table of profile options and a text field for the user VADA.GOMEZ.

Profile Option Name	Site
Applications SSO Login Types	
Applications Start page	
CWI AP Default MISC Account for Invoice	

User: VADA.GOMEZ

SSO

27. For each profile option listed in the "Role" section of the request ticket, find the profile option in Oracle and enter the corresponding value.

Quick Tips
Personal information originates from the HR

If the role request is for a Warehouse employee or Call Center employee, proceed to the corresponding steps below. If this is a standard role request, skip to the section of this manual, titled "Closing Oracle Request Tickets."

For warehouse employee requests:

There are a few extra steps needed beyond the standard role request process.

1. Re-open the Oracle application window.
